nings, and add eleven more memoirs to the above list, making thirty-six in all, so that the whole constitutes one of the most important recent meteorological publications and gives one a clear impression as to the advanced problems that agitate meteorology at the close of the nineteenth century.

The editorial work, by Prof. Angström, has been executed most conscientiously and the pages bear no evidences of the many vexatious annoyances and delays to which he was subjected in the course of the work.

### KNUT ANGSTROM ON ATMOSPHERIC ABSORPTION.

While the recent Bulletin G by Prof. F. W. Very, on atmospheric radiation was in press, Prof. Knut Angström of Upsala, was preparing a short paper on the part played by carbon dioxide gas and aqueous vapor and carbon dioxide gas in the phenomena of atmospheric radiation. This memoir, which was published in the Annalen der Physik immediately afterwards, is one of the most important recent meteorological publications and gives a clear idea of the advanced problems that agitate meteorology at the close of the nineteenth century.

The theoretical work, by Prof. Angström, has been executed most conscientiously and the pages bear no evidences of the many vexatious annoyances and delays to which he was subjected in the course of the work.
